

MPG Site Compatibility Guide for Internet Explorer 11

Currently the MPG Policy Management System is officially supported for use with Internet Explorer 8, 9, and 10. For user who logon with IE11, we suggest running those browsers in 'Compatibility Mode' to maintain site functionality. Earlier versions of IE and other non-Microsoft browsers are not supported at this time.

To enable 'Compatibility Mode' in IE11 for the MPG Policy Management System, add the url 'www.maritimepg.com' to your browser's compatibility list as per the instructions in the section titled "To change your Compatibility View settings" in this link: <https://msdn.microsoft.com/en-us/library/dn321449.aspx>

After adding the site to the list, close and re-launch your browser and navigate to the maritime logon screen. This should allow the site to run normally in most IE11 browsers.

Note: The above suggestion is offered as a workaround only. Maritime Program Group assumes no responsibility for any changes applied to your computer systems; proceed at your own risk. Please refer to your network or IT department for any questions or assistance with your local computer settings.
